

THAMESIDE ROOFING LIMITED

SPECIALIST INSTALLER OF HIGH PERFORMANCE SYSTEMS

ENVIRONMENT

At Thameside Roofing Ltd we are dedicated in caring about the impact our activities have on our environment.

We are currently working towards and carrying out practices which will enable us to attain our ISO 14001 accreditation.

Did you know on average the UK produces around 72 million tonnes of construction waste annually, it's difficult to extract the exact figure into roofing waste assuming this is 10% of the total that would be enough mastic asphalt to complete around 360000 square meters of roof area annually most of which is non recyclable.

Together with our partners, consideration is always our priority when looking at new projects to see if the existing surfaces can be left in situ to avoid the need for unnecessary landfill.

Through the high demands of building regulations and in the increase in Part L requirements the need for greater insulation thickness has increased to meet current U.Value requirements.

Our partners are now moving away from complex multi board systems, which have implications on additional packaging and transportation costs by creating insulation boards to a minimum thickness achieving improved thermal capacities and compressive strengths whilst complying with the requirements demanded from today's standards.

We are also pleased to be approved and regulated installers of green roof products being able to offer:

- **Extensive Green Roof's**
- **Intensive Roof Gardens**
- **Biodiverse Brown Roofs**

There is no doubt that the development of urban areas, especially high rise buildings in major cities, has had a detrimental effect on the environment and our lives.

The continued innovation of green roofs is beginning to make a real positive difference, by improving air quality, controlling water runoff creating reduced stress on our drainage system, whilst adding additional thermal and acoustic capabilities.

Continued improvements within our industry have resulted in products now being able to add purification to the air we breathe.

By way of converting nitrogen oxide and sulphur oxide into harmless environmentally neutral substances.

These products are self finished, low maintenance, easily installable and have the added benefits of the following.

- **Enhanced UV Protection**
- **Reduction in Surface Temperature**
- **Increased Life Expectancy**
- **Reducing the Urban Heat Island Effect Above Our Cities**

We are pleased to be able to advise and offer all of the above systems.

For further information please do not hesitate to contact us.
